QSAR TOOLBOX

QSAR Toolbox User Manual

Deploying the TEDRA plugin

Contents

1. Introduction

Version 4.6 of the QSAR Toolbox now requires a dedicated pluing in order to be able to retrieve data from an IUCLID6 server. The plugin has been developed especially for communication with the Toolbox and is called Toolbox Extended Data Retrieval and Aggregation tool (TEDRA). It has to be installed on the IUCLID system to which the users are connecting.

2. Deployments steps

1. Download the TEDRA plugin from the QSAR Toolbox website, section ***TEDRA plugin for IUCLID***:

   https://qsartoolbox.org/download/#tedra

2. Copy the TEDRA jar file to the following folder:

   <iuclid6-installation-folder>\payara5\glassfish\domains\domain1\iuclid6

3. Restart the IUCLID server

This completes the installation on the IUCLID side and users should now be able to import data and then perform searches on the imported entities using the QSAR Toolbox.

3. Compatibility

The TEDRA plugin has been developed and tested on IUCLID6 version 7.0.4 and should be compatible with all 7.0.x releases.
